

Certified rate-distance landscape: 368 PBB catalogue rows over 134 certified CSS parents

Sources: exp039_nogo_module.json (rows_capped_a_priori, rows_theorem_permits, family_closed_parents, falsification_gate.checks); results/partial_runs/exp039/parent_*.json (schema exp039-nogo-module-v1; d_z_exact = T_is_exact = true; 134/134 certified); EXP-037 row_*.json: upper_bound with verification.valid = true. Ordinates: capped rows = Theorem-H cap $d_Z(P)$ (certified $\leq$ witness UB whenever both exist); permitted / reversal / grey-v rows = certified witness upper bound; grey-x rows = catalogue-claimed d (untrusted, parents never certified; n in {180, 360}). Stars are the 7 certified reversals, each linked to its parent point; certified d in (d_pbb_certified_gt, upper_bound]. Marker area $\sim k$. Horizontal jitter (md5 of row key) is cosmetic only.
